ENGINEERED TO OUTPERFORM

NEW PRODUCT EXHAUST SYSTEM

ADD **2** HORSEPOWER
2 FT. LBS. OF TORQUE
2010 & **2**
KIA SOUL, 2.0L L4

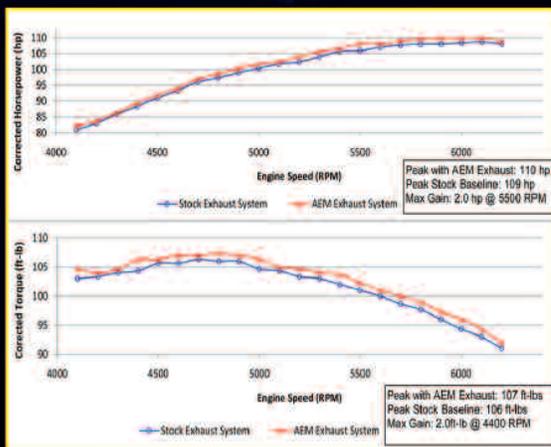

#600-0100
MSRP - \$361.00
JOBBER - \$270.75

The Kia Soul brings with it a unique style and plentiful list of features. For horsepower-hungry enthusiasts that sprang for the 2.0-liter equipped Soul, even more horsepower is now available with the release of AEM's Axle-Back Exhaust System.

With many criteria in mind, AEM's engineers tested several iterations of exhaust systems for the Kia Soul during the research and development stages. As data was collected and development continued, an axle-back version proved to offer the best combination of performance, sound and style. From the high-flow muffler, a brushed stainless steel exhaust tip was welded with precision to mount in the factory exhaust exit location of the Soul's rear bumper.

- Brushed, laser etched tip with double wall construction to prevent rear fascia deformation
- AEM muffler is designed for high flow performance with a deep sporty sound while avoiding annoying drone at light loads or freeway speeds
- Constructed of 409 Stainless Steel tubing and 304 stainless steel muffler for durability
- 3/8" thick stainless steel flanges for leak free seals
- Engineered for placement in OEM location
- OEM stealth appearance helps to avoid unnecessary encounters with law enforcement
- Street legal in all 50 states

Estimated horsepower and torque gains based on specific or similar vehicle dynamometer tests. Results will vary.
